

# VITA ENAMIC® Expert opinions on the new resin-infused ceramic

"VITA Enamic is the best fitting milled restoration I have ever accomplished with CEREC. Very pleased with the fit and easy finishing. I am also impressed with the ability to etch the internal surface and secure a great adhesive bond. The margin mill precision demonstrates excellent cavosurface margin integrity. Excellent for prospective events and margin integrity verification."

– Dr. James Klim

"As the longest user of the CEREC system in the United States, I have seen a lot of new products come and go. VITA Enamic, combined with the Omnicam is unbelievable and here to stay. The material mills so accurate and smooth it leads to amazing restorations. The marginal fit is beautiful and the restorations drop in an inlay/onlay prep with no adjustment. We believe this material is a perfect fit for our patients and our practice. We love it! "

– Drs. Mark and Shanna Morin

"This is clearly the direction of materials for all of dentistry."

– Dr. Dan Poticny

"Superb restorations with Enamic...a game changer!"

– Dr. Charles LoGiudice

"I am in love with Enamic. Not only is it blistering fast to mill and glaze, I can design thinner, sharper margins and have the confidence it will survive the milling process."

– Dr. Anthony Hatch

"Enamic is a versatile material with many applications. It's great to finally have a material that has been designed specifically for single visit CAD/CAM. Enamic allows me to complete restorations in less time and with less stress."

– Dr. Andrew Koenigsberg

"This is an amazing material that mills extremely well. I like the choice of shades and it matches the natural tooth shade very well. I also like that I do not need to reduce the tooth as much for traditional ceramics. Very nice material for inlays/onlays, it melts into the tooth. I like Enamic for posterior crowns and have even used it for veneers in the anterior; polishes very well and is easy to do. Nice to have this block as a choice for my patients!"

– Dr. Greg Campbell
